

Supplementary File 1

Delineation of Covid-19 relevant modules sets. The heatmaps on the left presented in this file represents the abundance levels for transcripts forming modules belonging to a given aggregate (rows), across three Covid-19 patients (P1-P3) relative to one uninfected control subject (columns) [Xiong et al dataset]. The data are expressed as the proportion of constitutive transcripts in each module being significantly increased (red circles) or decreased (blue circles) relative to N1. The heatmaps on the right represent the abundance levels for transcripts forming the same set of modules across 16 reference patient cohorts (columns).

Aggregate A1: Covid-19 relevant sets S1, S2 & S3

Xiong et al.
3 Covid-19 subjects

Altman et al.
16 references cohorts (985 subjects)

Heatmap Clustered

Heatmap Ordered

Aggregate A2: Covid-19 relevant sets S1 & S2

Xiong et al.

3 Covid-19 subjects

Altman et al.

16 references cohorts (985 subjects)

Aggregate A5: Covid-19 relevant sets S1 & S2

Xiong et al.

3 Covid-19 subjects

Altman et al.

16 references cohorts (985 subjects)

Aggregate A7: Covid-19 relevant sets S1

Xiong et al.

3 Covid-19 subjects

Altman et al.

16 references cohorts (985 subjects)

Aggregate A8: Covid-19 relevant sets S1 & S2

Xiong et al.

3 Covid-19 subjects

Altman et al.

16 references cohorts (985 subjects)

Aggregate A10: Covid-19 relevant sets S1

Xiong et al.

3 Covid-19 subjects

Altman et al.

16 references cohorts (985 subjects)

Aggregate A26: Covid-19 relevant sets S1

Xiong et al.

3 Covid-19 subjects

Altman et al.

16 references cohorts (985 subjects)
